EXECUTIVE SUMMARY

Senior Software Engineer with 16+ years of international experience specializing in the end-to-end design of scalable enterprise ecosystems. I deliver high-performance, multi-tenant cloud platforms and AI-driven decision intelligence systems that bridge complex data landscapes with intuitive user experiences.

My expertise spans the full software development lifecycle—from greenfield microservices architecture in .NET Core and Azure cloud-native infrastructure to the implementation of production-grade RAG (Retrieval-Augmented Generation) and Agentic AI pipelines. With a proven track record in highly regulated sectors—including banking, healthcare, energy, and government—I excel at transforming complex business requirements into robust, maintainable, and secure technical solutions that drive measurable operational efficiency.

“Want to go deeper? My Technical Portfolio covers my enterprise work, and my digital twin can answer your questions on the spot.”
